

**EQ-i**<sup>2.0</sup>  
assess. predict. perform.

# WORKPLACE

REPORT

**Stella Tucker**

May 15, 2013

# EQ-i 2.0 Model of Emotional Intelligence

## SELF-PERCEPTION

**Self-Regard** is respecting oneself while understanding and accepting one's strengths and weaknesses. Self-Regard is often associated with feelings of inner strength and self-confidence.

**Self-Actualization** is the willingness to persistently try to improve oneself and engage in the pursuit of personally relevant and meaningful objectives that lead to a rich and enjoyable life.

**Emotional Self-Awareness** includes recognizing and understanding one's own emotions. This includes the ability to differentiate between subtleties in one's own emotions while understanding the cause of these emotions and the impact they have on one's own thoughts and actions and those of others.

## STRESS MANAGEMENT

**Flexibility** is adapting emotions, thoughts and behaviors to unfamiliar, unpredictable, and dynamic circumstances or ideas.

**Stress Tolerance** involves coping with stressful or difficult situations and believing that one can manage or influence situations in a positive manner.

**Optimism** is an indicator of one's positive attitude and outlook on life. It involves remaining hopeful and resilient, despite occasional setbacks.

## SELF-EXPRESSION

**Emotional Expression** is openly expressing one's feelings verbally and non-verbally.

**Assertiveness** involves communicating feelings, beliefs and thoughts openly, and defending personal rights and values in a socially acceptable, non-offensive, and non-destructive manner.

**Independence** is the ability to be self directed and free from emotional dependency on others. Decision-making, planning, and daily tasks are completed autonomously.

## DECISION MAKING

**Problem Solving** is the ability to find solutions to problems in situations where emotions are involved. Problem solving includes the ability to understand how emotions impact decision making.

**Reality Testing** is the capacity to remain objective by seeing things as they really are. This capacity involves recognizing when emotions or personal bias can cause one to be less objective.

**Impulse Control** is the ability to resist or delay an impulse, drive or temptation to act and involves avoiding rash behaviors and decision making.

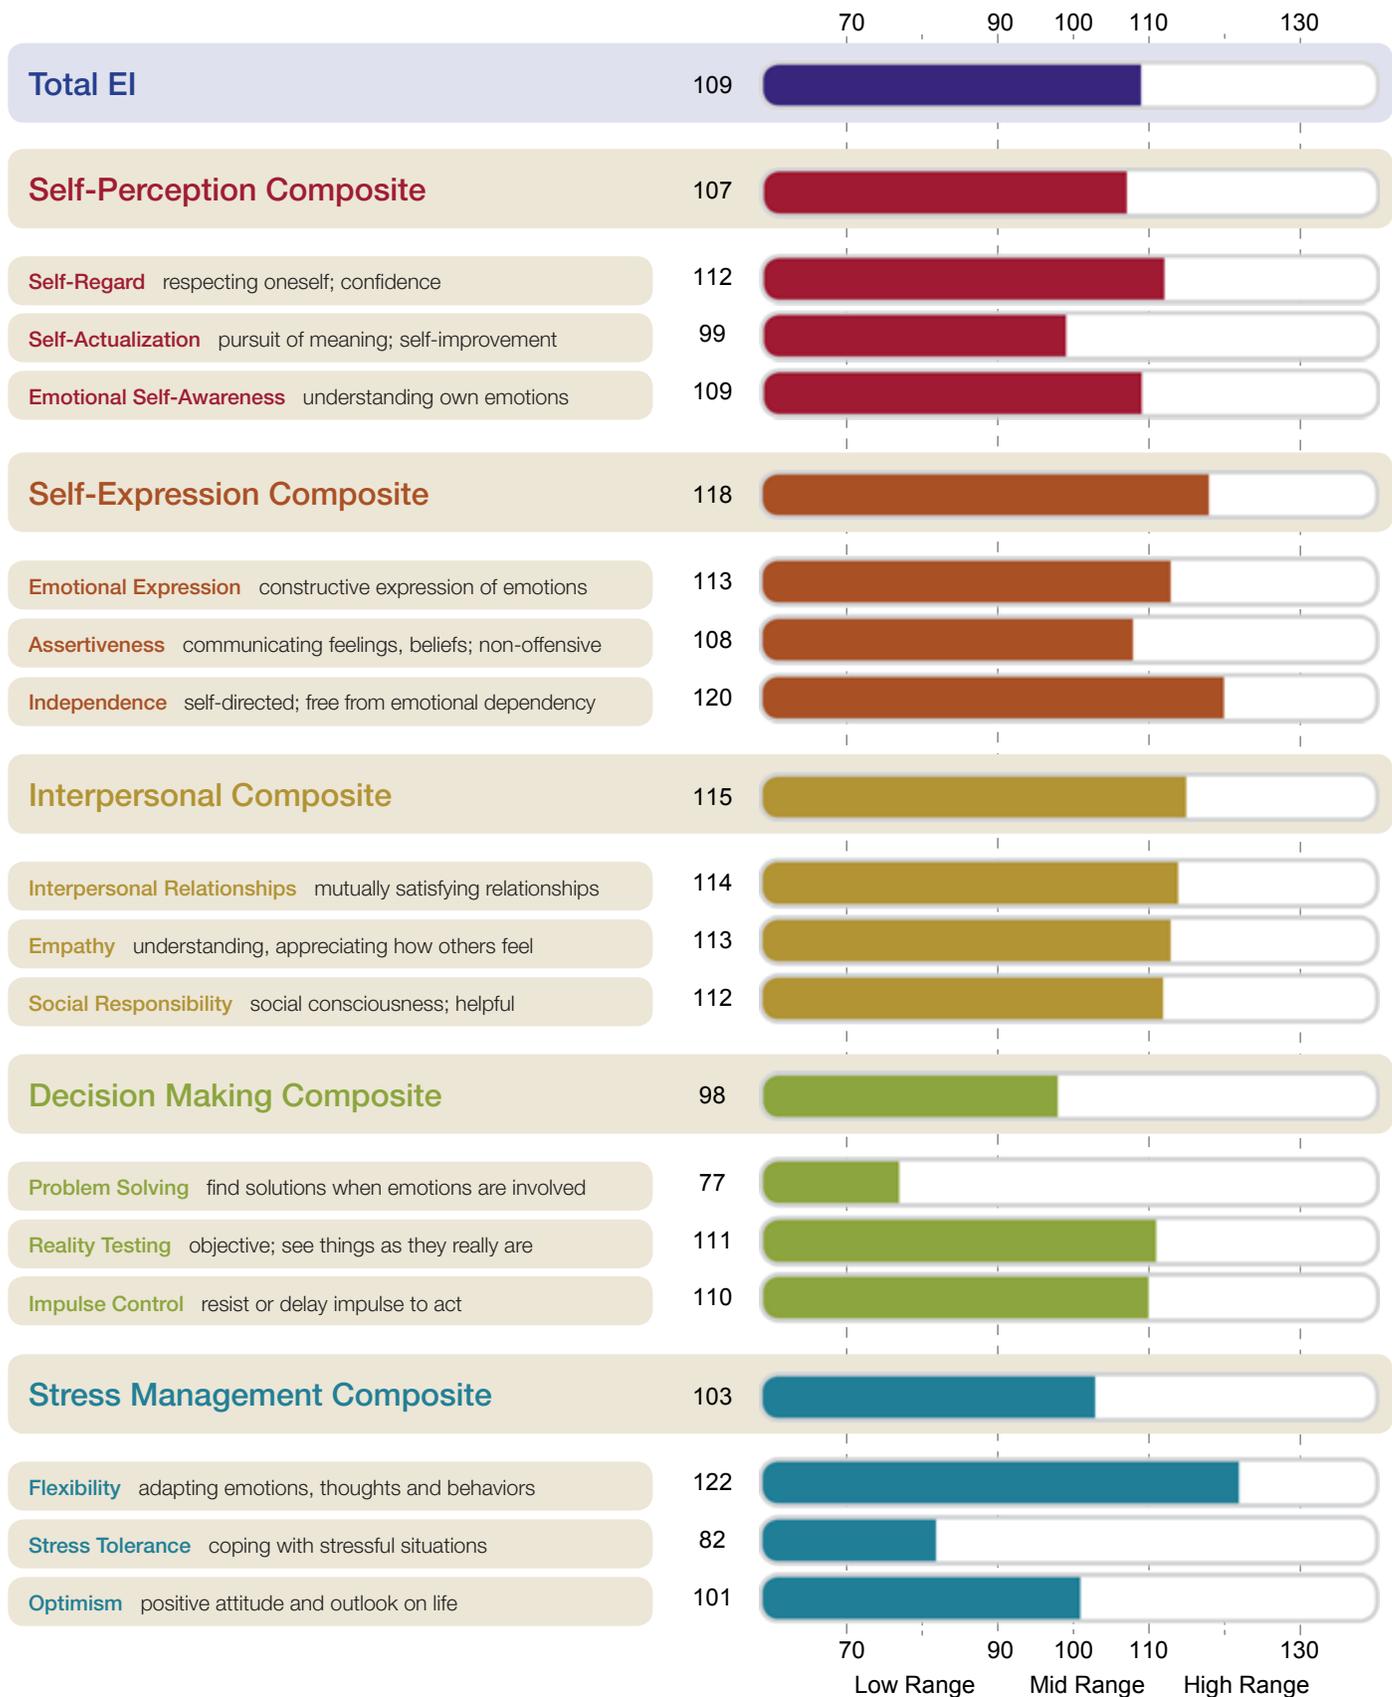

## INTERPERSONAL

**Interpersonal Relationships** refers to the skill of developing and maintaining mutually satisfying relationships that are characterized by trust and compassion.

**Empathy** is recognizing, understanding, and appreciating how other people feel. Empathy involves being able to articulate your understanding of another's perspective and behaving in a way that respects others' feelings.

**Social Responsibility** is willingly contributing to society, to one's social groups, and generally to the welfare of others. Social Responsibility involves acting responsibly, having social consciousness, and showing concern for the greater community.

# Overview of Your Results

# Self-Regard

**Self-Regard** respecting oneself; confidence

112

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Individuals with self-regard respect themselves and accept both personal strengths and limitations while remaining satisfied and self-secure. Stella, your result suggests that your self-regard is stronger than most people's. You know yourself and are comfortable with yourself, which generally translates into increased performance. You may have:

- a high level of respect for yourself, your talents, and your weaknesses.
- a willingness to confidently admit mistakes or unfamiliarity with a situation.

### Impact at Work

**Emotional Implications.** Your result may mean that on an emotional level you are driven to achieve your fullest potential, have a more positive outlook on your capabilities, and are more confident in expressing yourself than those with average self-regard. The potential challenge is that you could lose touch with objective assessments of your capabilities. Draw on reality testing behaviors to maintain a healthy self-perception.

**Social and Behavioral Implications.** Your willingness and ability to understand and accept your strengths and weaknesses is often perceived by others as confidence. People may frequently gravitate toward you, look to you for advice, and seek your leadership. Because your strengths are confidently demonstrated, you may be given opportunities or promotions that maximize these talents, but it is also important to seek out opportunities that stretch your less developed skills as well. To avoid potential negative consequences of overly high self-regard, use empathy and an appropriate level of assertiveness to avoid appearing overconfident.

### Strategies for Action

**Self-Regard Profile.** Seeking others' feedback on your strengths and weaknesses demonstrates a willingness to learn and gives you objective data to confirm whether your self-beliefs are in line with what others see.

- Identify those at work (colleague, manager) who know you well enough to comment on your strengths and weaknesses.
- Ask them to list your strengths and weaknesses with specific observations or examples.
- Without looking at their list, write what you believe your strengths and weaknesses are. Then compare lists. Look for disconnects and similarities between lists. Are there examples of where others didn't agree with your listed strengths?

**Own up to your Weaknesses.** Although challenging, openly admitting your weaknesses can help keep your Self-Regard in check with how your colleagues see you.

- Record your reaction to any mistakes or errors you make over the next few weeks. If you find yourself blaming "the system" or others for your mistakes, you might want to start openly admitting your points of weaknesses.
- Rather than placing blame, use mistakes as opportunities to show you know and accept your weaknesses and put in place strategies that manage them, rather than pretending they don't exist.

## Balancing Your EI

This section compares Self-Regard with Self-Actualization, Problem Solving, and Reality Testing. The subscale that differs the most from Self-Regard is Problem Solving. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Self-Regard(112)  Problem Solving(77)

Your Self-Regard is higher than your Problem Solving. These components work effectively together when self-confidence promotes the feeling that you can and will succeed. Therefore, cultivate a feeling of resilience and perseverance to commit to finding required solutions.

# Self-Actualization

**Self-Actualization** pursuit of meaning; self-improvement

99

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Self-actualization can be summed up in three words: pursuit of meaning. While this sounds quite philosophical, in the business world it means finding purpose and enjoyment in your job and performing to your fullest potential. Stella, your result suggests that you are passionate about your work and life outside of work and take pride in setting and achieving challenging goals. Although you may believe that you can accomplish more, your result may mean that:

- you place value on training and keeping your expertise sharp.
- you appear to be working or acting with a plan in mind.
- for the most part you believe you are leading a rich and fulfilling life.
- at times you turn on “autopilot” mode, going through the motions of your job without truly striving to excel.

### Impact at Work

**Emotional Implications.** Your success, happiness, and life satisfaction can probably be traced back to the fact that most of the time you do what you enjoy. Because you have found ways to apply your talents and strengths, you likely experience harmony knowing that your talents are being put to good use.

**Social and Behavioral Implications.** Your consistent drive to improve yourself, while pursuing personally relevant objectives, helps to create a fulfilling and varied life. This perpetual drive is often perceived by your colleagues as being organized, directive, deliberate, and purposeful. In addition, self-actualized individuals value the actual process of achieving their goals as much as or more than the final outcome. Therefore, you may find both short- and long-term planning, projecting, and scoping activities are likely natural processes for you.

### Strategies for Action

**The Small Things we Enjoy.** Sometimes you just need to look at your job under a microscope to develop an even deeper passion for what you do.

- Write down some of the things you do in your job that are motivating for you. No matter how small, everything makes the list. Review this list once a week; Monday is usually a good day. Remind yourself that even the small things (like having a client compliment you on your presentation) can push you to do your very best.

**Protect Your Time.** Since you already know what you’re passionate about, you need to protect the time you have scheduled for these activities so they do not fall lower on your list of priorities.

- Block off time in your calendar, well in advance, for those activities you enjoy, especially if they are the vulnerable, non-work related type. Seeing an appointment in your calendar, even if it is for lunchtime yoga, will help you keep your time commitment.

## Balancing Your EI

This section compares Self-Actualization with Self-Regard, Optimism, and Reality Testing. The subscale that differs the most from Self-Actualization is Self-Regard. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Self-Actualization(99)  Self-Regard(112)

Your Self-Actualization is lower than your Self-Regard. To balance these components, leverage your inner strength and confidence by participating in meaningful activities. Keep your expectations realistic to promote feelings of success. Set and evaluate goals that align with your strengths.

# Emotional Self-Awareness

**Emotional Self-Awareness** understanding own emotions

109

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

If you have a solid understanding of what causes your emotions, it is much easier to regulate your behavior and control the impact your emotions have on those you work with. Stella, your result indicates that you are in touch with your emotions and that you manage them in a way that is healthy for you and your relationships at work. It is likely that you:

- have a solid read of your inner self—you can describe and manage the emotions you are experiencing.
- are aware of how emotions impact team morale, collaborative relationships, and individual performance.
- still have a few emotions that make you uneasy or are difficult to fully understand.

### Impact at Work

**Emotional Implications.** One of the implications of recognizing your emotions and their triggers is that for you, experiencing an emotion is the result of a cause-and-effect relationship. You know when and why an emotion will be triggered and you know how to use that emotion to your benefit. You are usually in tune with the physiological sensations of emotion, but there may be some emotions that continue to slip by unrecognized.

**Social and Behavioral Implications.** Your level of Emotional Self-Awareness indicates that more often than not, you feel comfortable expressing your understanding of your thoughts and ideas to your colleagues and, moreover, you know how your emotions can increase individual and team morale. Your colleagues likely understand your stance and value your openness when it comes to how you are feeling. There may still be some circumstances at work that cause you to be unsure of your emotions. You could benefit from a bit more investigation into what triggered your feelings in these cases, and what subsequent action needs to be taken.

### Strategies for Action

**Cause and Effect.** Your strength in identifying a cause-and-effect relationship for your own emotions can be leveraged to predict others' emotional reactions.

- The next time you are in a meeting ask others, "How do you feel about this direction?" or "What is your gut telling you about this decision?"
- Identify the causes of your colleagues' emotions and how their emotions impact their buy-in to a decision. This will help not only to show that you care about others' feelings (empathy), but to give you the information you need to predict how colleagues will react in the future.

**Leveraging Emotions.** Although you understand emotions quite well, you can always work on refining your ability to adopt the right emotion at the right time. People with strong emotional self-awareness are able to bring on emotions in themselves that will help them with the task at hand.

- Experiment with different techniques and mediums to make you feel a wide range of emotions (e.g., somber, happy, angry, creative, or peaceful). Putting yourself in a slightly somber mood can help you focus on analytical tasks, while being happy will help you with brainstorming or creative tasks.

## Balancing Your EI

This section compares Emotional Self-Awareness with Reality Testing, Emotional Expression, and Stress Tolerance. The subscale that differs the most from Emotional Self-Awareness is Stress Tolerance. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

**Emotional Self-Awareness(109)** ↔ **Stress Tolerance(82)**

Your Emotional Self-Awareness is higher than your Stress Tolerance. When these scales work well together, you are able to recognize how stressful situations are affecting you on an emotional level. That is, you are better able to navigate the situation and manage the emotions created by the situation. Emotions should not be ignored but neither should they entirely dictate your behavior when under stress.

# Emotional Expression

**Emotional Expression** constructive expression of emotions

113

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Individuals who effectively express emotions find words and physical expressions to convey their feelings in a way that is not hurtful to others. Stella, your result suggests you extensively express emotion, using a large emotional vocabulary and nonverbal expressions to tell others how you feel. Your result suggests:

- you are comfortable expressing most, if not all emotions through words and/or facial expressions.
- you find beneficial ways to express your emotions, both positive (e.g., appreciation) and negative (e.g., anger).
- others do not have to assume what you are feeling, as what you say and do is evidence of your emotions.

### Impact at Work

**Emotional Implications.** Think of Emotional Expression as the action part of the emotional experience. You rarely keep emotions bottled up, preferring instead to express and work through them with others. For you, it is likely a natural process to describe your emotions in a way that is genuine and consistent. One implication for you is that you might express emotion so freely that it is seen as inappropriate for certain situations.

**Social and Behavioral Implications.** Successful relationships flow from a willingness to openly exchange thoughts and feelings. Your result suggests that not only are you capable of meaningfully expressing your emotions, but you are also quite eager to share these feelings with others. Sharing how you feel about a decision or issue helps improve team communication and decision making, resolves interpersonal conflict, and helps you gain the resources that you need. If emotions are expressed too frequently, you can quickly overwhelm your colleagues by sharing too much emotion at the wrong times (e.g., are you remaining angry over a bad decision when your team has moved on?).

### Strategies for Action

**Expression Check-In.** Use Empathy and Interpersonal Relationships behaviors to carefully watch others' responses to your emotions.

- The next time you express what you feel pay close attention to others' reactions. Notice their facial cues, tone of voice and body language; does it match what you would expect? For example, is your colleague as happy as you are about your promotion, or does he/she appear threatened by your advancement?
- This check-in will remind you to be vigilant of others' reactions to ensure your expressions are at the right intensity.

**Backing up your Emotions.** Backing up your emotions with the potential business impact of what you are feeling will help inform others of the source of your emotions and ensure you aren't seen as too emotional.

- In advance of the next meeting or discussion where you will need to gain resources or buy-in, prepare a business case to back up what you intend to express. For example, rather than just being anxious, you could prepare the following: "I am really anxious about meeting our timelines for this product. I'm anxious because we have lost two engineers to another project. If we don't receive more support from engineering, I am concerned we will lose thousands with a late product."

## Balancing Your EI

This section compares Emotional Expression with Interpersonal Relationships, Assertiveness, and Empathy. Achieving balance between these subscales can enhance emotional functioning.

### Emotional Expression(113)

Your Emotional Expression is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Emotional Expression with other subscales may lead to further EI development and enhanced emotional and social functioning.

# Assertiveness

**Assertiveness** communicating feelings, beliefs; non-offensive

108

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Picture a line between the words *passive* and *aggressive*. At the middle point of this line lies assertiveness, a place where you work with others by finding the right words at the right time to express your feelings and thoughts. Stella, your results indicate that you are operating at the middle of this line, being able to clearly articulate your emotions and needs while respecting the relationships you have with others. Some of the following characteristics may apply to you:

- you are firm and direct when necessary.
- you are positioned to achieve your goals by articulating your needs.
- you bear in mind others' feelings and consider them when voicing your opinion or thoughts.
- you either back down or become slightly aggressive in times of mounting pressure.

### Impact at Work

**Emotional Implications.** For the most part, you are able to stand your ground and ensure your voice is heard. The implication of doing this as well as most is that there will be times when you back down from your normally confident position. Something is being triggered at an emotional level that causes you to “cave in”; using your self-awareness to identify why this is the case will be beneficial.

**Social and Behavioral Implications.** Your level of assertiveness suggests that you have the knack for finding the right words at the right time to get your point across without dominating or manipulating your work environment. This includes communicating feelings, beliefs, and thoughts openly, allowing your team to see where you stand on a decision. Although there are still some instances where you could be more assertive (e.g., under pressure or scrutiny), you likely have many great ideas that for the most part are shared and contribute to the direction of your organization.

### Strategies for Action

**Identifying Cave Points.** What is it about certain situations that cause you to be less assertive than you wish to be? Lack of subject matter expertise? The presence of a more senior person? Unsure of your convictions?

- Identify the reasons for why you cave when you do.
- Use this information to proactively eliminate your cave points. For example, the next time you have a meeting on an unfamiliar topic, gather research ahead of time so that you can confidently voice your thoughts on the subject.

**Assertive Body Language.** To continue to ensure your assertive behavior is socially acceptable, be extra conscious of your body language, tone of voice, and emotional language when delivering your message (particularly if you are low in Emotional Expression and Emotional Self-Awareness); they may skew the message you are trying to put forth, even if you intend to be assertive with the content you are discussing.

## Balancing Your EI

This section compares Assertiveness with Interpersonal Relationships, Emotional Self-Awareness, and Empathy. Achieving balance between these subscales can enhance emotional functioning.

### Assertiveness(108)

Your Assertiveness is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Assertiveness with other subscales may lead to further EI development and enhanced emotional and social functioning.

# Independence

**Independence** self-directed; free from emotional dependency

120

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Stella, being independent means you are capable of feeling, thinking, and working on your own. Your results show that this is a well-developed skill, as you are more than willing and capable of pursuing your own ideas and course of action. You are more likely than most to be decisive, directive, and accountable for the responsibility associated with making decisions. Consider the following interpretation of your results:

- you are comfortable making decisions on your own.
- you can work without direction or reassurance from others.
- you accept responsibility for your decisions knowing that at times people will disagree with you.
- at times you may be overly independent, overlooking the importance of working with others by seeking their feedback before you make a decision on your own.

### Impact at Work

**Emotional Implications.** Your tendency to act and think on your own positions you to showcase your strengths in other areas of EI. Your strong Independence result also means that your emotions are freely expressed; you don't need reassurance or a group consensus to say what you feel. Remember that it is okay to reach out for help when you need it; always working alone can make you appear arrogant and alienating.

**Social and Behavioral Implications.** Your level of Independence indicates that you rarely depend on others to make important decisions. Because you are self-directed, you can analyze a situation on your own, formulate a response, and move into implementation mode without second guessing your decisions or looking for approval. This independent approach shows initiative, and in autonomous roles allows you to take responsibility for your actions when direction is limited. Due to your high level of independence, you must be cautious not to neglect the emotions and opinions of your colleagues. Keep a close eye on how often you go off in your own direction, rather than building coalitions.

### Strategies for Action

**Independence Check.** Not every situation requires you to act autonomously, although it may be your preferred approach to accomplishing your goals. Here are three questions you should ask yourself before making a decision independently:

- Am I missing subject matter expertise to make an informed decision?
- Am I hurting collaborative relationships by making this decision on my own?
- Does my decision have implications for those I work with? Would their input help me predict these implications?

**Securing Buy-In.** Effective, independent professionals don't march off in their own direction hoping that others follow; they balance self-directed thought with the ability to secure buy-in and support from key relationships.

- Examine past decisions that were not well supported by your colleagues. What did your decision-making process look like? Where might securing buy-in have broken down?
- Brainstorm ways that you can involve others in your decision-making process. The ultimate decision or plan may rest with you, but it will be easier to gain support when others feel empowered throughout the decision-making process.

## Balancing Your EI

This section compares Independence with Problem Solving, Emotional Self-Awareness, and Interpersonal Relationships. The subscale that differs the most from Independence is Problem Solving. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

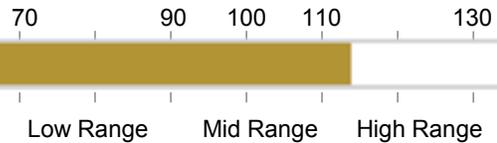

Independence(120) [↔](#) Problem Solving(77)

Your Independence is higher than your Problem Solving. These components can be balanced by acting collaboratively when problem solving. Leveraging interpersonal relationship skills where necessary and involving others in decision-making processes may serve to enhance your problem solving process.

# Interpersonal Relationships

Interpersonal Relationships mutually satisfying relationships

114

## What Your Score Means

Stella, this subscale is about developing and maintaining mutually satisfying relationships and your result shows an above-average capability to build relationships with compassion, trust, and mutual give-and-take. Your colleagues support you in getting your job done, and in turn others seek you out because of your approachable demeanor. Some characteristics of your result are:

- you have built up, or are currently building up, a useful network of colleagues and professionals.
- your relationships are authentic; you know people on a personal level.
- you feel at ease with people and look forward to engaging in social interactions.

### Impact at Work

**Emotional Implications.** For you, relationships are an essential part of life and you are likely heavily invested in making your relationships work. One implication of this emotional investment is that you may hide emotions or shy away from making decisions that could potentially cause conflict. Particularly if you scored high in Empathy and low in Assertiveness, you should determine if you or your relationships are suffering as a result of withholding your true thoughts and emotions.

**Social and Behavioral Implications.** Your result suggests that you take an active role in establishing and maintaining your professional relationships at work. You are probably seen as a “connector”, aware of who does what, who knows what, and who needs to know what. Maintaining confidences, team harmony and open communication are likely top priority for you in your job. As you continue to build relationships, it is important to know the boundaries of these interactions. Failure to recognize when you begin to occupy more and more of your colleagues’ time may result in less time allocated to projects, at which point your social interactions may prove costly to job performance.

### Strategies for Action

**Recognition Goes a Long Way.** Remember to celebrate events that are important to your coworkers, but also express recognition on a regular basis. Instances may include birthdays, promotions, or recognition for a job well done.

- Do you know what kind of recognition your coworkers prefer? Not everyone likes “Happy Birthday” sung at their desk or a reward given in front of their peers.
- Leverage empathy skills to determine what type of recognition motivates and is appreciated by each of your coworkers.

**Sharing the Truth.** A healthy work relationship needs to be based on open communication, without fearing that your opinion will cause irreparable damage.

- The next time you find yourself tempted to hold back your true thoughts for the sake of group happiness, pause.
- Write down what you really think or feel. Look at this statement and list all the potential positive and negative outcomes that could occur as a result of sharing your opinion.
- If the positives outweigh the negatives, rephrase what you want to say beginning with an agreement statement and ending with your true opinion.
- Bring this newly phrased statement to your discussion and be prepared to share it, starting with agreement and ending with your honest thoughts.

## Balancing Your EI

This section compares Interpersonal Relationships with Self-Actualization, Problem Solving, and Independence. The subscale that differs the most from Interpersonal Relationships is Problem Solving. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Interpersonal Relationships(114) ↔ Problem Solving(77)

Your Interpersonal Relationships result is higher than your Problem Solving result. These components are well balanced when you can leverage relationships with others to help solve problems, and recognize how your decisions may be affected by others. It is important to consider the opinions of others without being overly influenced by them.

# Empathy

**Empathy** understanding, appreciating how others feel

113

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Empathy, the ability to recognize, understand, and appreciate the way others feel, is a crucial EI skill at the heart of all effective work relationships. Stella, your result indicates that your empathy is well-developed; you are likely empathic towards others, respecting their ideas even when they differ from your own. Your “emotional read” on people is usually accurate, ensuring peers feel safe sharing important issues with you. With a result such as yours:

- you are constantly “tuned in” to how others are feeling.
- you care about others, and take their feelings into consideration before acting.
- it is easy for you to imagine how others feel and predict emotional reactions.

### Impact at Work

**Emotional Implications.** Generally, you “feel” for others more than the average person does, almost always showing sensitivity and respect for others. High Empathy can also be a double-edged sword. Being empathic, your coworkers trust you with their issues and feel comfortable coming to you for advice. You, being very concerned with their feelings, run the risk of taking on their problems, becoming the victim of your empathy.

**Social and Behavioral Implications.** The intensity with which you care for others is evident in the way you approach your job, whether it be when making decisions, resolving conflict, or leading change; you act in others’ best interests. Because you are constantly on the lookout for emotional reactions, you have a pretty good read of your team’s emotional landscape; you likely know ahead of time how people will react to what you have to say. You may want to be vigilant of putting too much emphasis on others’ feelings, causing you to avoid making tough decisions or dealing proactively with performance issues.

### Strategies for Action

**Watching a Pro.** Find someone who you believe is an effective communicator and team leader. Observe their communication style in practice, taking note of how they balance their ability to remain empathic and socially responsible with meeting organizational demands. Examine your scores on Independence, Interpersonal Relationships, and Assertiveness to see how you can leverage other skills to balance organizational and team progress with Empathy.

**Mixing Sugar with Spice.** It is important to ensure that your empathy doesn’t get in the way of handling tough conversations/decisions. Being empathic does not mean being extra nice all the time; you still have deadlines to meet and so does your organization. When a tough conversation or decision is needed, acknowledge that you may need more preparation time in order to be empathic. Then to prepare:

- Write down what you want to say and rehearse it.
- Be respectful of people’s reactions, but don’t let them derail you.
- Keep in mind that if you mirror the emotion, you will likely intensify the other person’s reaction. For example, if the news you are bringing someone makes them angry, by becoming angry yourself you are likely to make the situation more heated.

## Balancing Your EI

This section compares Empathy with Emotional Self-Awareness, Reality Testing, and Emotional Expression. Achieving balance between these subscales can enhance emotional functioning.

### Empathy(113)

Your Empathy is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Empathy with other subscales may lead to further EI development and enhanced emotional and social functioning.

# Social Responsibility

**Social Responsibility** social consciousness; helpful

112

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Social responsibility is that moral compass directing your behavior toward promoting the greater good and contributing to society and one's social groups. Stella, your result suggests that you are highly altruistic in your efforts, taking most, if not all, opportunities to help others. Your concern for societal issues is demonstrated through the selfless contributions you make, both at work and in your community. Based on your result, you:

- consistently demonstrate your social conscience and are compelled to help others.
- are seen as a "Good Samaritan" who helps out without expecting anything in return.
- gain fulfillment from a variety of sources, including those activities outside of work.

### Impact at Work

**Emotional Implications.** You are able to keep your emotions in perspective, having observed firsthand the difficulties others are facing. Also, because you contribute to a wide variety of activities, your emotions are not tied to one source. For example, if you have a setback in one area (e.g., loss of a key client account), you can look to another area for relief (e.g., coaching basketball).

**Social and Behavioral Implications.** Overall, you appear to be a cooperative and constructive member of your organization who acts in support of the common good. It is not uncommon to see someone with this level of Social Responsibility involved in a variety of social and leadership pursuits both inside and outside of the workplace. A potentially problematic implication of such involvement is that you may take on too many responsibilities, regardless of the cost to the quality of your work or your personal well-being. Be mindful that you don't engage in helping others as an escape from things that need to be fixed in your own life.

### Strategies for Action

**The Best Intentions.** Check in with yourself to ensure that you are not avoiding your current emotional state by focusing solely on helping others.

- Ask someone close to you (e.g., family or close friends) to describe what your intentions to help look like from their perspective. Others may be able to see the real motives behind even the best intentions.
- If you are overly involved to the point that your personal well-being is neglected or you are placing unrealistic expectations on your friends, family or work peers for their social or corporate involvement, it may be time to reflect on your motives behind your desire to help others.

**Inspiring Initiative.** Inspiring others to be socially responsible can create an overall feeling of meaning and charity in the lives of others while fueling your passion for contributing towards the greater good.

- Leverage your passion for causes you care about by reaching out to your friends and family for help.
- Brainstorm several activities that you, family and friends can engage in to help at least one of these causes.
- Identify a plan, specific roles for each person and a timeframe for these activities.

## Balancing Your EI

This section compares Social Responsibility with Self-Actualization, Interpersonal Relationships, and Empathy. The subscale that differs the most from Social Responsibility is Self-Actualization. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

**Social Responsibility(112)** ↔ **Self-Actualization(99)**

Your Social Responsibility is higher than your Self-Actualization. To balance these components requires balancing the importance of contributing to society with achieving your own personal goals. Helping others to achieve their goals is important, but ideally this should work in a reciprocal way, so that the relationship helps you to achieve your potential and aspirations as well.

# Problem Solving

**Problem Solving** find solutions when emotions are involved

77

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Problem Solving is not about the quality of your solutions, but rather how effectively you use your emotions in the process of solving a problem. Stella, this is an area of emotional intelligence that you currently underuse, sometimes falling victim to your emotions during times when decisions need to be made. You may find yourself overwhelmed with the responsibility of making a decision, thus delaying the process of arriving at a timely conclusion. Your result indicates:

- you may prefer others to make decisions for you.
- you may struggle to keep a clear focus on the problem at hand.
- much of your time and energy is spent worrying about decisions rather than trying to solve them.
- you may feel as if you have little control over the outcome of the process.

### Impact at Work

**Emotional Implications.** You are likely derailed by your emotions when it comes to decision making. Rather than leveraging the impact an emotion can have on your ability to solve a problem, you fall victim to your own emotions, such as worry, anxiety, and fear. You may end up feeling paralyzed, exerting effort into worrying about a problem rather than generating the most effective emotion to help you solve it.

**Social and Behavioral Implications.** To others, you may appear indecisive, incapable, or unsure of yourself when faced with a problem to solve. Rather than taking action to resolve a problem as quickly as possible, your emotions may cloud your thinking, causing you to worry, feel overwhelmed, or avoid solving the problem all together. Although you may eventually reach sound solutions, it is difficult for people to see you in a leadership capacity where decisiveness and execution are paramount.

### Strategies for Action

**Define A Problem.** By keeping your focus entirely on the definition of the problem, you can eliminate the tendency to worry about everything extraneous to the issue (e.g., the problem's history).

- Write down a precise and objective definition for a problem you need to solve (i.e., just like it would appear in a dictionary without including your subjective thoughts/language).
- Keep this definition in a place where you can be reminded of it daily. Without any emotional terms, this problem is now simply a task like any other on your to-do list and should be tackled in small steps.

**Watch Your Limit!** Our brains typically handle seven chunks of information, whether we are memorizing or deciding between many options; seven seems to be the maximum amount of information we can effectively manage.

- The next time you are stuck in solving a problem, ensure you are dealing with no more than seven pieces of information (or deciding among fewer than seven choices). Too much information paralyzes you, while too little leaves you uninformed.
- Also, if your decision is stressful, your mental and emotional resources will be even fewer, so you may want to limit yourself to three options.

## Balancing Your EI

This section compares Problem Solving with Flexibility, Reality Testing, and Emotional Self-Awareness. The subscale that differs the most from Problem Solving is Flexibility. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

**Problem Solving(77)** ↔ **Flexibility(122)**

Your Problem Solving is lower than your Flexibility. To balance these areas, consideration should be given to alternate solutions, but once a course of action is chosen it should be implemented with commitment. Ideally, you want to remain open to changing your plan when required, but doing so too frequently without due cause can be inefficient over the long-term, and create confusion for those around you.

# Reality Testing

**Reality Testing** objective; see things as they really are

111

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Reality Testing—“being grounded” or “tuned into the situation”—means things for what they really are. In business, this includes accurately sizing up the environment, resources, and future trends in order to set realistic plans/goals. Stella, your results indicate that you have the ability to remain objective. By keeping your personal biases at bay, you likely make trusted and sensible decisions that others can buy into. Your result suggests:

- you are very unlikely to misinterpret critical information or allow emotions to color reality.
- you are keenly aware of your own strengths and weaknesses.
- you are attuned to your immediate environment and attentive to the task at hand.

### Impact at Work

**Emotional Implications.** Your ability to see most situations objectively may lead you to make very black and white conclusions: something is right or it is wrong, there are no shades of grey. Your emotions can also appear black and white: either you are angry or you aren't. For example, when an event triggers a slight emotion in others, you may remain emotionally neutral as you believe emotions cloud your assessment of the event.

**Social and Behavioral Implications.** Staying grounded, objective, and realistic is essential for the strategic and tactical elements of leadership, from accurately matching a five-year strategic plan within the forecasted economy to creating daily production quotas. Because you frequently see situations as they really are (and not as you wish them to be), your team likely turns to you for the hard facts when it comes to decision making and goal setting. As a result, you are likely to find yourself setting and pursuing meaningful and achievable goals. Be aware, however, of when your objectivity gets in the way of your creativity and willingness to set stretch goals.

### Strategies for Action

**Gut Checks.** Emotions provide us with information about an event. If you ignore them completely, you are missing out on crucial data that objective analysis cannot provide.

- Try a few “gut checks” throughout your day. Reflect on how you felt about a discussion, calling a customer, making a decision, etc.
- Gut checks are particularly important for large decisions or meetings where you usually allow objective data (e.g., a 10 to 4 vote in favor of pulling the project) to take precedence over what your emotions tell you (e.g., Karen was furious that her project was cut).

**Put your Realism to Work.** You are likely to notice when personal bias is affecting your performance or your team's performance.

- Leverage this strength by using objective processes to facilitate the group's productivity (e.g., SWOT analysis, strategic-planning techniques) when you notice progress becoming sidetracked by personal agendas or unrealistic views of the situation.
- Research some facilitation or meeting management techniques to create a more productive mindset for your team, where the focus is not on exploring personal speculations but rather on accomplishing realistic objectives in each meeting.

## Balancing Your EI

This section compares Reality Testing with Emotional Self-Awareness, Self-Regard, and Problem Solving. The subscale that differs the most from Reality Testing is Problem Solving. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Reality Testing(111)  Problem Solving(77)

Your Reality Testing is higher than your Problem Solving. Balancing these components requires attention to emotional information that can lead to timely decisions. Reality Testing is about being grounded and practical, however the best solutions involve integrating objective information with people factors, negotiating and managing emotional responses, and taking swift action when needed.

# Impulse Control

**Impulse Control** resist or delay impulse to act

110

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Impulse control involves understanding the appropriate times and ways to act on emotions and impulses, and the importance of thinking before acting. Stella, your result shows someone who extensively controls their emotions and impulses to act. Your highly stable nature helps to put people at ease; coworkers will feel that they can easily predict your behavior or mood and will be more likely to open communication channels with you. Your result may indicate a tendency to:

- be deliberate and apt to survey a situation before making a decision.
- be patient and calm even when provoked.
- be able to think before you act; you rarely regret what you have said or done.

### Impact at Work

**Emotional Implications.** Your emotions are often expected visitors: you experience them, learn from them, and then take action based on this emotional knowledge. This deliberate use of emotions means you give yourself lots of time to understand how you feel and then determine what is the required action.

**Social and Behavioral Implications.** Your ability to remain focused, delay temptation, and avoid making rash decisions has tremendous interpersonal and professional implications. Leadership requires flexibility, but it is an astute focus and deliberate planning that achieves corporate buy-in. Because you reflect before you speak, your position is well articulated, grounded in evidence and, as a result, respected by your team. People may see your behavior as predictable and calculated and although this is necessary in many workplaces, ensure that it isn't at the expense of listening to your instincts or participating in spontaneous conversations.

### Strategies for Action

**Unfreezing.** If you find yourself significantly less impulsive than your colleagues, you may appear to be rooted in thought when others want action. If progress is being held up by too much contemplation your teammates may see you as a barrier to moving forward.

- Before making a decision, determine upfront what evidence you will need in order to feel comfortable acting. Whose approval do you need? What is the threshold of risk you are willing to accept?
- Knowing this information upfront will help you balance deliberate decision making with the progress demanded by today's business.

**Giving Your Gut Reaction a Voice.** People high in Impulse Control have a lot of self-talk happening all the time. You rarely act unless you have played out multiple scenarios and as a result, your gut reaction can often be overlooked.

- Describe a situation in the past week where you regretted not speaking up or acting quickly.
- What emotion were you experiencing? Was it fear, uncertainty, sadness?
- If you could rewrite the situation, what would you have done differently? How could you have listened to your instincts despite the emotion you felt?
- Use this example of how you wished you had behaved as a goal. Try to demonstrate this behavior in the next two weeks.

## Balancing Your EI

This section compares Impulse Control with Flexibility, Stress Tolerance, and Assertiveness. The subscale that differs the most from Impulse Control is Stress Tolerance. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

**Impulse Control(110)** ↔ **Stress Tolerance(82)**

Your Impulse Control is higher than your Stress Tolerance. Good impulse control is helpful for avoiding rash decisions when under stress, but balancing these facets means not being overly constrained to the point of being unable to act. The interplay of self-control under stress with recognizing and acting on your emotions and needs is a delicate balance.

# Flexibility

**Flexibility** adapting emotions, thoughts and behaviors

122

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Flexibility requires that you be able to modify your thoughts, emotions, and behaviors in response to change. Stella, your results speak of a well-developed ability to adjust yourself to changing conditions and priorities. At work, you likely see change as necessary for innovation and staying ahead of the competition. You can easily assume a change leadership role, where you can encourage others to be as open to change as you are. Some indicators of your result are:

- you are more inclined than most to enjoy change.
- you are able to change your mind when evidence suggests that you do so.
- you have a compliant attitude to working with others, even when opinions differ.

### Impact at Work

**Emotional Implications.** Adapting comes easily to you, whether it be an unexpected schedule change or a new strategy for your team. This flexible approach means you may find it difficult to become emotionally invested, as you tend to work with an understanding that ties will inevitably be broken. Be cautious that you don't appear to lack conviction or become so flexible that your efforts are scattered.

**Social and Behavioral Implications.** Your results suggest you frequently accept change and likely thrive when change is required. Being highly flexible is a desired trait in today's ever-changing work environment and you embrace the required adjustments to your work very well. You may be seen a change leader, facing adjustments with energy and garnering buy-in from your peers. Keep in mind that change preceded by reason and foresight is welcomed, particularly by those who are not as flexible as you are. You may have to alter the way you promote change to help people who struggle with the emotional adjustment change requires.

### Strategies for Action

**Change for Change's Sake.** Flexibility can look like impulsiveness if it is not grounded in sufficient thought and valid evidence.

- "Changing for change's sake" can leave a lot of people (including customers) shaking their heads in confusion over the loss of their once effective status quo.
- When you find yourself changing your thoughts, emotions, priorities, or direction, stop and ensure that this change is grounded in reasonable evidence and is not simply due to boredom with the status quo. This is particularly important if you are high in Interpersonal Relationships, as you may have the tendency to adjust your actions on a whim to the new ideas that are brought forward by others.
- Communicate this rationale for change to those impacted.

**Stay the Course.** Your ability to remain flexible is likely to come in handy. However, in team environments, it is very important to make sure your colleagues are aware of any changes that you are thinking about and embracing. Not all people deal well with regular change. Make an effort to document your changes and reasons for the change. This will go a long way to instilling trust and gaining buy-in from your colleagues.

## Balancing Your EI

This section compares Flexibility with Problem Solving, Independence, and Impulse Control. The subscale that differs the most from Flexibility is Problem Solving. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Flexibility(122) [↔](#) Problem Solving(77)

Your Flexibility is higher than your Problem Solving. It is good to be open to change and to consider options, as long as you don't get stuck making a decision or postponing action. The best decisions usually involve proper consideration of alternatives, and the ability to act when needed.

# Stress Tolerance

**Stress Tolerance** coping with stressful situations

82

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Stress Tolerance is the ability to cope with and respond effectively to stress and mounting pressure. Stella, your result indicates that often your attempts to cope with stress are associated with feelings of anxiety and nervousness. Your repertoire of coping strategies may be limited and it is likely you have difficulty choosing the appropriate strategy for the situation. Some characteristics of your result are:

- emotions may get in the way of your ability to cope with stress.
- areas of EI weakness are often apparent during times of stress.
- pressure or competition at work is likely to hinder your performance.

### Impact at Work

**Emotional Implications.** Being low in Stress Tolerance gives your emotions the opportunity to take control of you. This can compromise your ability to think clearly and select a coping strategy in response to stress. You may not be able to manage your emotions and use them to your advantage. For example, recognize that a positive emotion could help you brainstorm solutions to help alleviate your stressful situation.

**Social and Behavioral Implications.** The way in which one copes with stress varies from person to person. Given your result, you may display an angry or agitated disposition, and become heated or overly emotional in difficult situations. As a result, others may see you as fragile or unable to handle tough news. How often do you think the truth is withheld from you due to your reduced tolerance for stressful circumstances? You may also respond to stress by becoming withdrawn, showing little energy or emotion. In either case, you run the risk of isolating yourself from the support of close relationships, further compounding the stress in your life. Watch for a tendency to develop nervous habits, overeat or sleep excessively, isolate yourself from others, neglect responsibilities, or use of drugs or alcohol.

### Strategies for Action

**Finding Control.** Perceiving that you have control over a situation is one of the greatest alleviators of stress and its harmful side effects (e.g., high blood pressure).

- Coping strategies will help arm you with personal control and power over stress. Research coping strategies that you see your peers use and keep a log of all strategies you can use to combat your next stressful situation.
- Having a physical reference point, like this list of strategies, will help give you control by providing you with a choice of coping options.

**Social Buffer.** Friends, family and close work peers can provide a buffer from the effects of stress on your well-being. Reminding yourself of the social resources at your disposal can arm you with coping strategies to draw upon when stress appears.

- Take inventory of the resources (e.g., friends, colleagues) you have at your disposal and the strengths each brings to your relationship.
- Identify how each person can help you to better cope with stress. For example, while a friend may run with you to take your mind off of a stressful day, a close colleague might be able to actually provide a solution as she knows your workload better.

## Balancing Your EI

This section compares Stress Tolerance with Problem Solving, Flexibility, and Interpersonal Relationships. The subscale that differs the most from Stress Tolerance is Flexibility. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Stress Tolerance(82)  Flexibility(122)

Your Stress Tolerance is lower than your Flexibility. Aligning your stress tolerance with flexibility will enable you to recognize whether change or maintaining the status quo is the most effective course of action. Sometimes making a change is the most effective, while other times staying the course and dealing with the situation is the optimal approach. In situations where you feel stressed, make sure various coping methods have been considered.

# Optimism

**Optimism** positive attitude and outlook on life

101

70 90 100 110 130

Low Range Mid Range High Range

## What Your Score Means

Optimism, the ability to remain positive despite setbacks, often differentiates between “star performers” and others in the workplace. It permeates almost every application of EI, from helping you persevere to enabling you to view change as a good thing. Stella, your result shows a person who is normally optimistic, preferring to see the world in a positive light. A result in the average range also indicates that you are not so overly optimistic that you are blind or naïve to the realities of life. Some characteristics of your result are:

- you tend to see the world with a “glass half-full” approach.
- you are hopeful about the future.
- you are energized by setbacks and obstacles, fuelled to overcome challenges in life.

### Impact at Work

**Emotional Implications.** Optimistic people experience a range of emotions. You are not so optimistic that you ignore fear, nor are you so pessimistic that you ignore happiness. To your team, this grounded optimism is likely contagious; others will see your hopeful vision of the future, and with realistic plans they will see that this vision is attainable.

**Social and Behavioral Implications.** Hopefulness and resilience are attributes of effective leaders. You are likely able to see opportunities and possibilities that others may overlook or simply reject for being too difficult, too time-consuming, or outside of the organization’s current comfort level. Your goals (and if applicable, the goals you set for others) are likely to reflect your optimistic approach to work; you see the possibilities and set stretch targets that help you strive for the best. There is still room to increase your level of optimism, as certain instances at work likely cause you to be more negative than you wish to be.

### Strategies for Action

**Pessimistic Moments.** If there are times when you feel less optimistic, take note of when these occur.

- Identify the trigger for your pessimism. Is it when timelines are tight? Are you in a leadership role and skeptical of others’ capabilities?
- Debate the validity of this pessimism. Look to the past to confirm whether similar successful or unsuccessful situations have occurred.
- If your pessimism is warranted, perhaps contingency plans for this risk should be considered.

**Reevaluate.** When you are faced with a challenge and your normally optimistic demeanor wavers, you may need to reevaluate your goals in order to visualize a successful outcome.

- Adjust your tasks and goals into more manageable and attainable segments. For larger, more daunting projects, try to break them into five to seven smaller steps.
- This does not mean that you should oversimplify or trivialize what is needed, but it does help to become more solution-focused at smaller intervals than to be burdened by a single overwhelming goal.
- For each smaller step, describe what you visualize success to be. Keep focused on these smaller outcomes to help bring your optimism back in line.

## Balancing Your EI

This section compares Optimism with Self-Regard, Interpersonal Relationships, and Reality Testing. The subscale that differs the most from Optimism is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

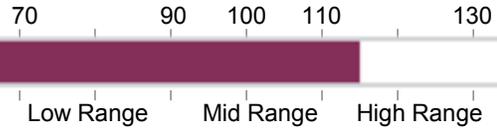

Optimism(101) [↔](#) Interpersonal Relationships(114)

Your Optimism is lower than your Interpersonal Relationships result. Leveraging your relationships can help to promote positive feelings and a positive outlook. This is especially true when you surround yourself with people who are positive themselves, and make you feel good about yourself. However, ensure your outlook does not become overly tied to what others think, so that your optimism is not merely a product of your social network.

# Well-Being Indicator

**Happiness** satisfied with life; content

115

## How to Use this Page

Happiness includes feelings of satisfaction, contentment and the ability to enjoy the many aspects of one's life. It is different than the other EI abilities in that Happiness both contributes to, and is a product of, emotional intelligence. As such, your result in Happiness is like an indicator of your emotional health and well-being.

Your Happiness result is shown below, linked to your results on the four subscales most often associated with Happiness.

Because Happiness is so interconnected with all EI abilities, you may find further development opportunities if you explore how the remaining subscales contribute to your level of Happiness, and vice versa.

## Happiness

Stella, your result in Happiness suggests that you almost always maintain a happy disposition towards all aspects of your life. You enjoy the company of others and are likely on a positive life course. Your happiness is seen and experienced as infectious. Your result in Happiness is high, as are your results across the four subscales most connected with Happiness. You may want to look into your lower results on other subscales (Problem Solving and Stress Tolerance) to identify ways your Happiness can bolster these areas. Your result indicates that you may:

- exclude cheerfulness at both work and play while participating in activities you truly enjoy.
- be seen by coworkers as motivating and resilient in the face of obstacles.

### Self-Regard (112)

Happiness is a by-product of believing in oneself and living according to your own values and standards. Your high level of Self-Regard helps to promote positive feelings about oneself, confidence, and enhanced life satisfaction and happiness.

- If you could improve one facet of your life, what would it be? Why?
- Aside from material things, what is it about you that makes you truly happy?

### Optimism (101)

In the face of setback and disappointment, the ability to recover and claim a happy state is contingent on one's level of optimism. Your results suggest you are optimistic and hopeful most of the time, but perhaps you could use this outlook more frequently so that your happiness becomes even more personal, permanent and justifiable.

- When are you the least optimistic? How could your outlook be improved in these situations?
- When faced with a new challenge, how do you typically feel? List your emotions and think about why you feel this way.

### Interpersonal Relationships (114)

Your Interpersonal Relationships result indicates that you have well-developed relationships that likely help shield you from the negative effects of life's daily demands. If maintained, these relationships can enhance and sustain pervasive feelings of happiness.

- Are there times when you struggle with your relationships? If so, what causes the struggle and how do you remedy conflict and miscommunication?
- Do you have a mentor? Do you act as a mentor to someone else?

### Self-Actualization (99)

Happiness comes from a willingness to learn and grow on a journey aligned with your values. Your result suggests a good level of self-actualization, but further development in this area will help to promote feelings of achievement and overall happiness.

- Identify what you value most in life. Are you spending enough time on the activities most important to you?
- What legacy will you leave behind?

# Action Plan

The steps you take towards achieving your EI goals will determine whether or not success is realized. Use this step-by-step activity plan to help guide you closer to your goals. Remember to use the **SMART** goal setting criteria for each goal.

**S**PECIFIC  
**M**EASURABLE  
**A**CTION-ORIENTED  
**R**EALISTIC  
**T**IMELY

Write down up to three EI skills or behaviors that you would like to further develop (e.g., “reflective listening” to build empathy, or “recognizing how my body reacts to stress” to raise emotional self-awareness). The SMART goals that you outline in the template should help to strengthen these EI skills and behaviors.

- 1.
- 2.
- 3.

Write down up to three overall qualities that you would like to have (e.g., integrity, providing clear leadership, team player, clear communicator). In some way the goals you outline in this action plan should help you achieve the overall qualities you identified.

- 1.
- 2.
- 3.

Transfer your SMART goals into the action plan template below.

SMART Goal	Time Frame	Benefits	Measure of Success	Support and Resources Needed	Potential Barriers
Listen to others	In team meetings Starting from today	Other people will listen to me I will get to hear everyone's views	Feedback from the team to say that I am listening to them more Take actions that other people have suggested	From the team to give me honest feedback	Time – often do not have time to listen to views but just need to give instructions. If this is the case need to tell people at the beginning of the meeting

I commit to this action plan \_\_\_\_\_  
(signature)

# EI Development Commitment

A Development Commitment is a tool to help hold you accountable for accomplishing the goals outlined in your action plan. As we all too often know, our plans for personal growth and development often fall by the wayside when we get engrossed in work and our

organization's demands win the competition for our time and attention. By outlining your objectives here and leaving a copy with your coach you are increasingly more accountable to reach your personal goals.

## My Personal Development Goals

My action plan includes the following goals:

Due Date

1.	
2.	
3.	
4.	

Your Signature \_\_\_\_\_

Your Coach's Signature \_\_\_\_\_
